02 Hero Section

AI-POWERED FIRE SAFETY TRAINING

Train like it's real. Without live-fire risk.

FireSafeX combines a smart physical extinguisher, mixed reality, AI-guided learning, and real-time assessment to help organizations deliver **workplace fire safety training**, practice, assess, and certify fire-safety response skills as part of a complete **corporate fire safety training** program.

Supporting Statement Real equipment. Virtual fire. Intelligent guidance. Measurable performance.

03 The Problem

Fire-safety training shouldn't stop at theory.

Many organizations need practical **fire extinguisher training**, but traditional approaches to **workplace safety training** create trade-offs between realism, safety, cost, repeatability, and measurement.

Live Fire — Live Fire Training Live-fire drills can provide hands-on experience as part of formal **employee emergency training**, but require controlled environments, supervision, physical setup, consumables, cleanup, and operational planning.

The challenge

- Fire setup
- Safety supervision
- Consumables
- Physical space
- Cleanup
- Operational disruption
- Limited repeatability

Classroom & Video Theory and video-based training can build fire-safety awareness as part of typical **online fire safety training**, but they don't provide the same opportunity to physically practice extinguisher handling and response technique found in more comprehensive **fire prevention training** programs.

The challenge

- Theory-focused
- Limited hands-on practice

- No physical extinguisher interaction
- Limited practical assessment
- Infrequent practice

Conventional VR Controller-based **VR fire training** can simulate fire scenarios, but a controller does not reproduce the physical form and handling of an extinguisher.

The challenge

- No realistic extinguisher form factor
- Limited physical interaction
- Limited grip/squeeze realism
- Less natural handling
- Limited physical performance data

FireSafeX connects the physical and digital worlds to deliver true **immersive fire safety training**.

Real equipment + Mixed Reality + AI + Assessment

04 The FireSafeX Solution

Real Weight. Virtual Fire. Measurable Results.

FireSafeX brings together the physical and digital parts of fire-safety training into one connected **fire safety training platform**.

Smart Extinguisher Practice with a physical extinguisher form factor built for genuine **hands-on fire extinguisher training**. The smart **fire extinguisher training equipment** captures key actions such as pin removal, handle pressure, orientation, and movement.

Mixed Reality Experience virtual fire scenarios in the real environment through immersive **mixed reality fire training**. Meta Quest 3 mixed reality places simulated fire scenarios into the trainee's surroundings.

AI Safety Expert Learn, ask questions, and receive guidance from an **AI safety instructor**. AI-supported learning provides theory guidance, voice interaction, safety Q&A, and practical coaching as part of an **AI-powered training platform**.

Real-Time Assessment Measure the response, not just completion, with built-in **fire safety assessment** tools. Training data can be used to evaluate actions, technique, timing, movement, and scenario performance for a complete **fire safety performance assessment**.

Connected Platform Turn every session into a training record. Training history, assessment results, progress, analytics, and certification records can be managed through connected **safety training management software**, with **digital training records** and a built-in **training analytics platform**.

FireSafeX turns fire-safety training from a one-time activity into a repeatable, measurable **fire safety skills training** experience.

05 Product Experience

Module 01: Smart Extinguisher

Real physical handling. Intelligent sensing.

The FireSafeX smart extinguisher uses a physical extinguisher form factor designed for realistic **fire extinguisher simulation** and training interaction.

- Pin removal
- Handle pressure
- Orientation
- Movement
- Bluetooth Low Energy
- Wireless communication
- Real-time sensor data
- Haptic feedback
- Virtual fire interaction
- Training feedback

Rechargeable · Portable · Reusable

No extinguishing agents required for simulation.

Don't learn extinguisher handling from a controller. Practice with a physical extinguisher interface built for genuine **fire extinguisher handling training**.

Module 02: Mixed Reality

Virtual fire. Real environment.

FireSafeX uses Meta Quest 3 passthrough mixed reality to bring fire scenarios into the trainee's physical surroundings, delivering **virtual reality fire training** without a live flame.

Real environment + Virtual fire + Smart extinguisher

Pull → Aim → Squeeze → Sweep

Train through different **virtual fire extinguisher training** scenarios without preparing a live-fire environment.

Practice the response where people actually work—without introducing live fire into the training environment, as part of a true **immersive fire training** experience.

Module 03: AI Safety Expert

Your intelligent fire-safety instructor.

The **AI fire safety instructor** supports trainees throughout the learning experience.

- Understand fire-safety fundamentals and procedures.
- Interact through voice-driven safety questions and answers as part of an **AI training assistant** experience.
- Receive guidance during training.
- Use feedback to better understand the training experience.

Voice Interaction · Safety Q&A · Theory Guidance · Practical Coaching · Multilingual Support

AI doesn't replace the training experience. It makes the training experience more guided and accessible, delivering **intelligent safety training** at scale.

Module 04: Assessment

Measure the response.

FireSafeX captures practical interaction and turns it into measurable training data for accurate **fire extinguisher assessment**.

- Pull
- Aim
- Squeeze
- Sweep

Technique · Timing · Movement · Accuracy · Completion

From physical action to measurable performance, supporting **safety competency tracking** across the organization.

06 How It Works

Process: Train. Practice. Assess. Certify.

Phase 1: Knowledge Building Start with interactive theory, visual learning, videos, and AI-guided instruction as part of structured **fire safety education**.

Learn

- Fire-safety fundamentals
- Fire behaviour
- Extinguisher concepts
- Safety procedures
- Situational awareness

Phase 2: Action & Practice Enter a mixed-reality fire scenario and operate the physical FireSafeX training device for genuine **fire extinguisher training simulator** practice and hands-on **fire response training**.

Practice

- Pin removal
- Aiming
- Handle operation
- Hose movement
- P.A.S.S. technique
- Scenario response

Phase 3: Measurement Trainees complete theoretical and practical assessments while FireSafeX captures relevant performance data for a complete **fire safety skills assessment**.

Measure

- Knowledge
- Technique
- Timing
- Accuracy
- Device interaction
- Scenario completion

Phase 4: Certification Assessment results can be stored as structured training records to support competency tracking and certification workflows, including **fire safety certification** and compliance documentation.

Learn → Practice → Perform → Measure → Certify

07 Assessment Metrics

Don't just test what people know. Measure how they respond.

FireSafeX connects physical extinguisher interaction with scenario performance to create a more measurable **practical safety assessment** experience.

- Detect the extinguisher pin action.
- Track orientation and aiming behaviour.
- Capture handle operation.
- Evaluate movement and response technique.
- Combine relevant performance data into an assessment result.

From action to competency

Performance Metric Flow

Measure the skill. Not just the attendance — through built-in **training performance tracking**.

08 AI Expert & Enterprise Platform

- Interactive theory and guided learning.
- Voice-driven safety Q&A.
- Contextual training support.
- Guidance based on the training experience.

Voice interaction · AI responses · Theory guidance · Practical coaching · Multilingual support

One platform. Complete visibility.

Manage the training program beyond the headset through a centralized **fire safety training software** suite.

Organizations → Teams → Users Content → Training → Assessments Sessions → Progress → Performance Results → Competency → Records

Platform capabilities

- **User Management:** Manage organizations, teams, users, and roles.

- **Content Management:** Control training and theoretical content.
- **Assessment Management:** Configure quizzes, scenarios, and passing criteria for structured **safety training assessment** programs.
- **Training History:** Track sessions and user progress with detailed **safety training records**.
- **Analytics:** Understand training performance and completion using a dedicated **safety analytics platform**.
- **Certification Records:** Maintain competency and certification information to support **fire safety compliance training** requirements.

09 Global Deployment & Industries

One platform. Every language. Every region. Every role.

FireSafeX is designed to support organizations operating across different locations, teams, languages, and training environments.

Deliver supported learning and AI guidance across languages as part of a **multilingual safety training** experience.

Create different training experiences for: Employees · Safety Officers · Supervisors · Instructors · Administrators

Adapt training content and workflows to regional requirements for **global safety training platform** deployment.

Configure training, permissions, content, assessments, and workflows.

Built for real-world environments.

- **Offices · Headquarters · Corporate Campuses** Build workplace fire-response readiness without disrupting everyday operations, with practical **workplace fire training**.
- **Factories · Plants · Manufacturing** Practice response in production and operational environments, designed for **manufacturing fire safety training** and **factory fire safety training** needs across **plant fire safety training** and **warehouse fire safety training** programs.
- **Airports · Aviation Facilities** Prepare teams for fire-response scenarios in aviation environments through dedicated **aviation fire safety training**.
- **Vessels · Ports · Maritime Operations** Support emergency-response readiness for maritime teams with focused **maritime fire safety training**.

- **Energy Facilities · Field Operations** Train for practical response in demanding operational environments, including **oil and gas fire safety training** and **chemical plant fire safety training** scenarios.
- **Schools · Universities · Campuses** Build practical fire-safety awareness and response skills across educational environments through accessible **fire safety training for schools**.

10 Connected Ecosystem

One connected fire-safety training ecosystem.

- Physical training interface.
- Immersive practical scenarios.
- Intelligent learning and guidance.
- Measurable practical performance.
- Connected training records and data.
- Enterprise management and analytics through a unified **enterprise training platform**.
- Theory, videos, quizzes, history, and supported training workflows across devices.

Final Call to Action

Train for the moment that matters.

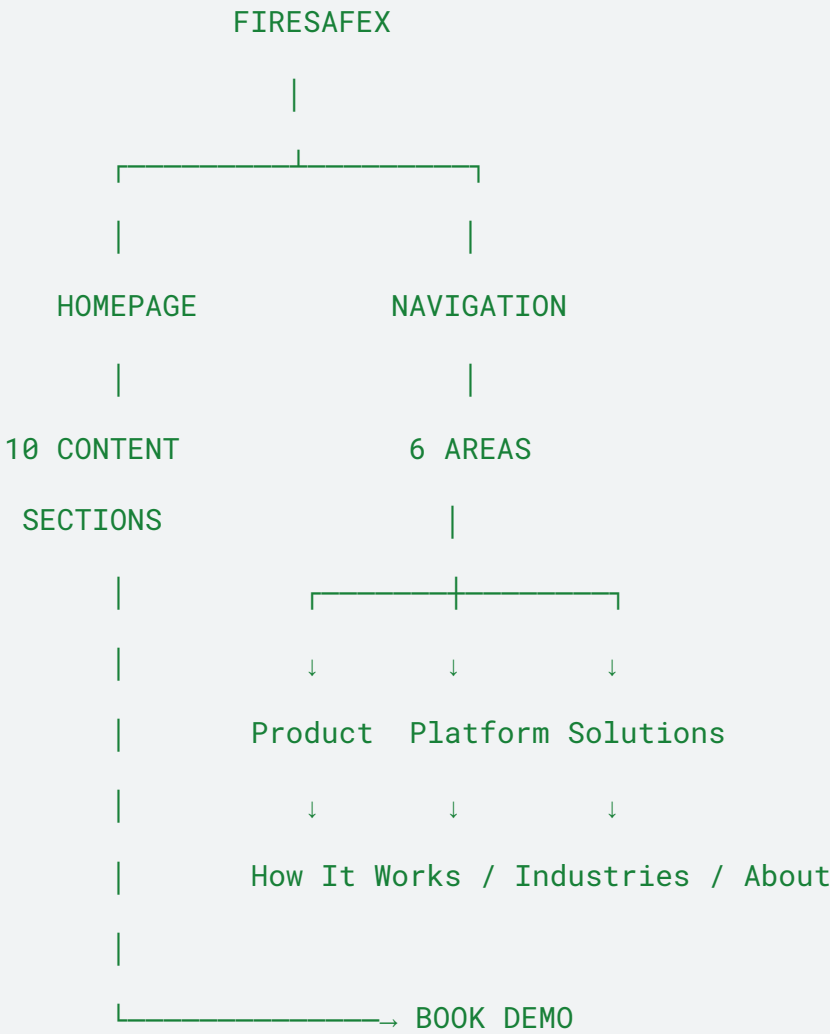

FireSafeX helps organizations move beyond awareness training with real physical interaction, immersive practice, intelligent guidance, and measurable performance, delivering complete **industrial safety training** and **emergency response training** outcomes for **enterprise fire safety training** programs.
